

# Programming a barcode scanner to add barcodes to Create Lists

Scan each of these barcodes in sequence

## Recall Defaults

This will reset the scanner to factory default settings

## Enter/Exit Configuration Mode

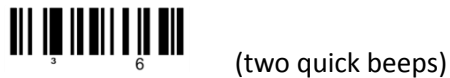

## Configurable Suffix #1

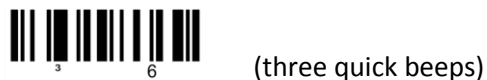

### Code Byte 1

### Code Byte 6

### Code Byte 6

Sometimes the second 6 doesn't work. It thinks you are scanning the same barcode a second time by mistake. Keep trying it. If it gets messed up, just start over with Recall Defaults (Exit Configuration mode first, if you get a raspberry sound)

## Configurable Suffix #2

(one beep)

### Code Byte 0

(one beep)

### Code Byte 3

(two beeps)

### Code Byte 2

(three beeps)

## Enter/Exit Configuration Mode

(three slow beeps)

It should be all set.
