Hi Mark!

One of the front desk librarians at the Dinah Branch had a question about how to edit a bibliographic record in Leap. I gave her a quick walk through, but you know more than I do .When you get a chance, could you email Coreen and see if she still needs some help?

Thanks!

Holly

"What? Chewie! Nah, it's just a dead animal, Chewie. Chewie, wa-wait! Don't! Nice work."

✦ AI Overview

"What? Chewie! Nah, it's just a dead animal, Chewie. Chewie, wa-wait! Don't! Nice work" is a quote from Clarivate. 🔗

Expertise Problem

nothing = "something"

nothing = "something"

```
function myMessage() {
    echo "Hello IUG2025";
}

myMessage();
```

nothing = "something"

```
function myMessage() {
    echo "Hello IUG2025";
}

myMessage();
```

```
set @startdate = DATEADD(MM,DATEDIFF(M,0,GETDATE())-1,0);

set @enddate = DATEADD(S,-1,DATEADD(MM, DATEDIFF(M,0,GETDATE()),0));
```

That would've worked if you hadn't stopped me.

When you put something out in the world, to what degree do you still get to control it and license it?

~Mark Zuckerberg

I think that with respect to content that's already on the open web, the social contract of that content since the '90s has been that it is fair use. Anyone can copy it, recreate with it, reproduce with it. That has been "freeware," if you like, that's been the understanding.

FRIDAY THE 13TH
THE GAME

With today's decision, the U.S. Copyright Office confirms that the current level of video game preservation is appropriate and recognizes that video games present unique copyright concerns that should always be taken into consideration.

The game industry's absolutist position—which the ESA's own members have declined to go on the record to support—forces researchers to explore extra-legal methods to access the vast majority of out-of-print video games that are otherwise unavailable.

Removing Patron ID Information from Transaction Files

Polaris records system transactions in transaction log files that are used for reporting, trouble-shooting, and system tracking purposes. Many circulation and patron accounting transactions are associated with specific patrons, and the log files that record these transactions store the specific patron IDs associated with the transactions. Using the Patron Services parameter **Remove patron ID from circ transactions**, you can purge this patron-specific information from your transaction records after a time period you specify. The same settings also purge patron IDs from item record histories. A nightly SQL job, PurgePatronIDFromCircTransactions, purges the patron IDs from the transactions according to your settings.

> **Important:**
> Patron IDs are not removed from transactions generated by the system unless this feature is enabled at the system level.

See also:

- Circ Transactions from Which Patron IDs Are Purged

We've used iTiva from Illion for Phone Notices for many many years. They don't have a vendor hosted service for it though. For SMS we are using EMAG from Verizon.

👍 1   🙂

Nate B (ACPL) Yesterday at 17:59
Also an iTiva library here

February 5, 2025

@miekoccs Question for everyone! We want to investigate what options are out there for sending phone notices. Fellow Polaris customers - what service do y...
Katie LeBlanc - CMPL (MI) Today at 06:33
We are using Innovative's Phone Alerts IPA along with the SMS.

Does anyone know if there's a way to limit how many times staff can waive say, lost or damaged charges on a patron's account? I'm pretty sure it's not, but just wanted to check. Had a director asking - they pointed out that you can limit the number of claims and were wondering about waiving charges as well.

Wes Osborn - CLC (OH) Today at 12:27
There is support for a waiver request workflow:
https://documentation.iii.com/leap/7.7/Default.htm#LEAP1_0/Patrons/Waiver_request_workflow.htm

I've been dealing with oversight issues this week. The problem I run into is that the proscribed waiver action throu select and then waive with notes can easily be bypassed by just checking out an item to a new account and then ov track those without running a complete transaction logfile and then isolating user with workstation and then the ci Whole lotta excel sorting there.

I'm definitely looking at that waiver request workflow after this last week.
